                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         vitamin B12 deficiency, folic acid deficiency, Wernicke disease, tobaccoalcolon amblyopia and Marchiafava-Bignami disease. The invention also has has manestatic and thrombolytic activity, serve as nutritional supplements and modulates ecto-Arpase activity. The invention acts as a cytostatic agent and is useful in immunotherapy. The present sequence is human CD39 protein. Note: This sequence is described in the specification as being the same as the human CD39 protein represented in SBQ ID NO: 13 of the sequence listing, however the two sequences are different.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   muscular-gen; ophthalmological; osteopathic; nootropic; antiparkinsonian; cytostatic; human; CD39 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CD39-like protein, gene mapping, food supplement, ecto-ATPase activity, gene therapy, multiple sclerosis, rheumatoid arthritis, autoimmune thyroiditis, diabetes mellitus, myasthenia gravis, autoimmune inflammatory eye disease, osteoporosis, osteoarthritis, Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, leukaemia, nervous system disorder, neuroprotective, antiarthritic,

The invention is useful in treating cancer, leukaemia and related disorders such as acute lymphocytic leukaemia, acute myelocytic leukaemia and chronic leukaemia, autoimmune disorders such as multiple sclerosis, rheumatoid arthritis, Guillain-Barre syndrome, insulin dependent diabetes mellitus, myasthenia gravis and graft-versus-host disease, allergic disorders such as asthma, respiratory disorders, inflammatory disorders such as septic shock, systemic inflammatory response syndrome (SIRS) and crohn's disease, central and peripheral nervous system disorders such as ischaemia, parkinson's disease, Alzheimer's disease, Huntington's chorea, systemic lupus erythematosus, human immunodeficiency virus-associated myelopathy and transverse myelopathy and nutritional disorders such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antibody or its fragment that specifically binds to CD39L3 polypeptide, useful for detecting and purifying CD39L3 polypeptide, for treating leukemia, and for detecting and preventing metastatic spread of

```
The invention relates to an isolated nucleic acid comprising at least 10 contiguous nucleotides of any of the 233 polynucleotide sequences given in the specification, or its complement. The nucleic acids encode cancerassociated proteins. Also included are an expression vector comprising the isolated nucleic acid or expression vector, a microarray for detecting crecombinant nucleic acid or expression vector, a microarray for detecting a cancer-associated (CA) nucleic acid comprising the above comprising at least 10 contiguous nucleotides of any of the above comprising at least 10 contiguous nucleotides of any of the above.

CC comprising at least 10 contiguous nucleotides of any of the above comprising frame of a CA sequence selected from any of the 95 conjument), an isolated antibody, (or its antigen binding fragment) that connected an isolated antibody, or its antigen binding fragment) that connected antibody, a pharmaceutical composition comprising the above monoclonal antibody, a pharmaceutical composition comprising the above conflowed and a pharmaceutical excipient, a kit for detecting cancer cells (comprising the antibody cited above, methods for diagnosing cancer or for detecting the presence or absence of cancer cells in an individual, a method for delivering a therapeutic agent to cancer cells in an individual, an electronic library comprising the above polymetide (or their fragments), methods of screening polymucleotide or polymetide (or their fragments), methods of screening

The CD314 polymucleotide is useful as hybridisation probes, as primers for PCR, for chromosome or gene mapping, in the recombinant production of protein, and in generation of antisense DNA or RNA. The production of protein, and in generation of antisense DNA or RNA. The protein of the invention is used as molecular weight markers, and as food supplements and for modulating ecto-APPase activity. The invention is useful for preventing, treating or ameliorating a medical condition, e.g. multiple sclerosis, rheumatoid arthritis, autoimmune thyroiditis, diabetes mellitus, myasthenia gravis, autoimmune inflammatory eye disease, osteoporosis, osteoarchritis, autoimmune inflammatory eye disease, amyotrophic lateral sclerosis, cleukaemia or nervous system disorders and in gene therapy. The present sequence is the human CD39 protein. Note: This sequence is stated to be the same as that shown as SEQ ID 13 in sequence listing, however these

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
for anticancer activity or for a bioactive agent capable of modulating the activity of a CA protein (CAP), methods for detecting cancer associated with expression of a polypeptide in a test cell sample, a method for treating cancers and a method for inhibiting the expression of A gene in a cell. The composition and methods are useful for detecting, diagnosing, preventing and treating cancers, especially lymphoma and leukaemia. These may also be used in screening for agents that modulate cancer. The present sequence is a human CAP protein sequence. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the published_pot_sequences

The invention relates to CD39-like polypeptides (CD39-like nucleotide-triphosphatase, NTPase) and their corresponding polynucleotides. The invention also relates to a method for making CD39 protechis. The methods and compositions of the invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CD39-like polypeptide, such as HIV infection, hepatitis, multiple sclerosis, systemic lupus erythematosus, rheumacoid arthritis, Guillain-Barre syndrome, thyroiditis, diabetes, myasthenia gravis, graft-versus-host disease (GHVD) and asthma. The present sequence is the human CD39 protein note: This sequence is described in the specification as being the same as the human CD39 protein represented in SEO ID NO: 13 of the sequence listing, however the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LSNYPFDFQGARIITGQEEGAYGWITINYLLGKFSQKTRWFSIVPYETNNQETFGALDLG 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                361 BIKTSYAGVKEKYLSEYCFSGTYILSLLLQGYHFTADSWEHIHFIGKIQGSDAGWTLGYM 420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated CD39L3 polypeptide and polynucleotide, useful for diagnosing, preventing or treating HIV, hepatitis, multiple sclerosis, systemic lupus erythematosus, arthritis, diabetes and asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GASTQVTFVPQNQTIESPDNALQPRLYGKDYNVYTHSFLCYGKDQALMQKLAKDIQVASN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a polypeptide sequence encoded by the nucleic acid or its fragment, a molecule capable of inhibiting expression of the nucleic acid or a molecule which binds to the polypeptide sequence. The invention is used to diagnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is angiogenic disorder in a mammal, particularly a human. The disorder is conficient of disorder in a mammal, particularly a human. The disorder is angiogenic disorder in a mammal, varicularly a human. The disorder is endometriosis associated with neovascularization, restenosis due to angioplasty, overproduction of tissue due to cicatriation, a peripheral vascular disease, hypertension, vascular inflammation, a peripheral anestial infarction, chronic heart disease, cardiac congestion or macular degeneration due to age or osteoporosis. This sequence corresponds to a protein encoded by a differentially expressed DNA used in the composition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Compositions for diagnosing, prognosing and treating angiogenic disorders including tumor vascularization and heart disease, comprise nucleic acid or polypeptide differentially expressed in angiogenesis.

N-PSDB; ADK60715

Compositions containing nucleic acid or polypeptide differentially expressed in angiogenesis are useful to diagnose, prognose and treat angiogenic disorders including tumor vascularization and heart disease.

Claim 7; SEQ ID NO 297; 405pp; French.

The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a molecule capable of inhibiting expression of the nucleic acid or its fragment, a molecule capable of inhibiting expression of or its fragment, a molecule capable of inhibiting expression of or molecule which binds to the polypeptide sequence. The invention is used to diagnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is angiogenic disorder in a mammal, particularly a human. The disorder is coronical associated with neovascularization, restenosis due to angioplasty, overproduction of tissue due to cicatrisation, a peripheral coronical inflammation, wascular disease, hypertension, vascular inflammation, Raynaud disease, angioplasty, overproduction of tissue due to cicatrisation, a peripheral coronical infarction, chronic heart disease, cardiac congestion or macular degeneration due to age or osteoporosis. This sequence corresponds to a procein encoded by a differentially expressed DNA used in the composition of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                Second 11328, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHIGMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REPERENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 00/241,755

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR PLILNG DATE: 2000-10-03

PRIOR PLILNG DATE: 2000-10-03

PRIOR PLILNG DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOCTHARE: PaugiSEQ for Windows Version 4.0

Sequence 11559, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
PAPELICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
FILE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
FILE OF INVENTION NUMBER: US/09/949,016
CURRENT APPLICATION NUMBER: 00/241,755
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-10-06
SOUTHWARE: POSC ID NOS: 207012
SOUTHWARE: PASC FOR Windows Version 4.0

Name=Placental II;
Name=Placental II;
Sequence=VSP_003607, VSP_003608, VSP_003609;
ISOId=P49961-3; Sequence=VSP_003607, VSP_003608, VSP_003609;
TISSUE SPECIFICITY: Expressed primarily on activated lymphoid
cells. Also expressed in endothelial tissues. The vascular isoform and the placental isoform II are present in both placenta and umbilical vein, whereas placental isoform I is present in placenta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Koziak K., Khczmarek E., Kittel A., Sevigny J., Blusztajn J.K.,

MISCELLANEOUS: Optimal pH is 7.0-7.5 with ATP as substrate and 7.5-8.0 with ADP.

SIMILARITY: Belongs to the GDA1 / CD39 NTPase family.

Cell Genet. 81:287-289(1998).

-I- FUNCTION: In the nervous system, could hydrolyze ATP and other nuclectides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation.

Hydrolydes ATP and ADP equally well.

-I- CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

-I- COPACTOR: Requires calcium and magnesium (By similarity).

-I- SUBGUNIT; Homodimer; disulfidee-linked (By similarity).

-I- SUBGUNIT; Belongs to the GDAI / CD39 NTPase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE FROM N.A.

Mol. Brain Res. 73:85-92(1999).
                                                                                                                                                                                                                                                                       Neuropharmacology 36:1189-1200(1997).

-!-PUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

-!-CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.
-!- COFACTOR: Requires calcium and magnesium.
-!- SUBGNIT: Homodiner; disulfide-linked (By similarity).
-!- SUBCELINGAR LOGATION: Integral membrane protein (Potential).
-!- TISSUB SPECIFICITY: Expressed in primary neurons and astrocytes, kidney, jiver, muscle, thymus, lung and spleen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could also nucleotides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

1. CAPALTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

2. CAPALTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

3. CAPACTOR: Requires calcium and magnesium (By similarity).

3. SUBCELLULAR LOCATION: Integral membrane protein (Potential).

3. SUBCELLULAR ENCATION: Integral membrane protein (Potential).

4. STRICHALLICHER (AMP of MASCIE). Spleen and lung.

5. CAPACTOR: Mascle, spleen and lung.

6. PTW: Cleaved into two polypeptides that seem to stay together by noncovalent interactions.

7. SIMILARITY: Belongs to the GDA1 / CD39 NTPase family.
                                                                                                                                                                                                                                                                                                             302 YSOCAFNGIFLPPLOGDFGAFSAFYFVMKFL-NLTSEKV-SOEKVTEMMKKFCAQPWEEI
